

N09301 Provisions Sink Bowl

The Sink Bowl is a simple yet robust dispensing system that erodes containerized solid or powder detergents for filling sinks, bus pans or other receptacles. Because it's manually operated, there are no batteries to change, no electronics to service and it's incredibly easy to install.

Chemical concentration is controlled by adjusting the control valve that supplies pressurized water flow to the bowl spray jet. Water that is not used for dissolving chemical is diverted and mixed with the chemical output via a durable "Y" connector mounted on the bowl discharge.

Key Features:

- Pre-Assembled, Ready To Install
- Simple Installation
- Secure Concentration Adjustment
- Rugged Actuator Handle
- Brass Vacuum Breaker
- Reliable Operation
- Low Cost
